- Alarm clock with volume offset adjustable playing your own WAV-files.
- Display of current channel stream rates (>=7000)
- cifs-1.42b

EzPlanet - Main - GeminiV320

- Multisocket second camd socket (cam1.socket) switchable.
- Register an own addon server (useraddon.xml)
- Provider, Frequency, symbol rate and FEC displayed on infobar (dependent on skin)
- Picon integrated in Gemini (the PNG file must have the same name as the channel) -> Installation of Picons via Blue Panel
- True automount, examples in var/etc/automount.conf. Devices get mounted automatically and also erased if they are not in use for longer than 2 minutes (only working if the kernel of Gemini 3.1 is in use)
- Installation of addons via browser

NEW:

- automount.conf - can be edited using the Blue Panel
- Menu for recordings in the WebIF and Blue Panel, where before and after record time and the location can be changed.
- dropbear now active in all images (ssh - daemon)
- "http authentication" can now be separately activated/deactivated for the message box
- added the possibility to have the infobar permanently active in radio mode
- now everything can be displayed in the extra field, when supported by the skin.

Fix + Update:

- attend CVS
- cifs-1.44
- Busybox 1.2.1

Interfaces WebIF: <http://127.0.0.1/cgi-bin/GeminiInfo> <http://127.0.0.1/cgi-bin/StopCam?ZAHL> (ZAHL = number of cam) <http://127.0.0.1/cgi-bin/StartCam?ZAHL> (ZAHL = number of cam) <http://127.0.0.1/cgi-bin/InitCam> <http://127.0.0.1/cgi-bin/ResetCam>

We'd like to thank everybody who participated in the "Gemini suggestion" thread. Unfortunately many things can not be realized from our side. This images doesn't contain any keys or softcams. Backups or other modified Images are not from us and won't be supported!

Recommendation: If you don't install the Image in flash memory, the flash image shouldn't be of a old version. A swap file/partition (>= 16MB) should be present if several processes running in background.
